

$$(D - 400)/C = 6.5 - 400/T$$

Multiply both sides by C:

$$D - 400 = C*(6.5 - 400/T)$$

Thus,

$$D = 400 + C*(6.5 - 400/T)$$

Similarly, from equation (2):

$$200/T + (D - 200)/C = 7$$

Solving for D:

$$(D - 200)/C = 7 - 200$$

Final model answer:

Final Answer: The speed of the train is 80 km/h and the speed of the car is 100 km/h.
